Hosted
Grafana Dashboard

→

Local Streamlit
Dashboard App

Why?

Direct connection to MongoDB needs enterprise license

Grafana suited for time data. Not as easy for categorical

No native box-plots -> plug-ins = dependency hell

Dashboard

```
--- EVALUATION MODE ---
Paste GOLD transcript (what you actually said). Empty=skip: Dispatcher, hier IC 2145. Ter hoogte van Leuven richting Brussel-Zuid is er een ster
ke rookontwikkeling in rijtuig 6. De conducteur meldt paniek bij reizigers en meerdere personen met ademhalingsproblemen. Ik verminder snelheid
en bereid een noodstop voor, verzoek onmiddellijk brandweer en medische bijstand.
Correct service? [FIRE|POLICE|MEDICAL|INFRA|NONE] (optional): FIRE
Correct urgency? [LOW|MEDIUM|HIGH|CRITICAL] (optional): CRITICAL
Was suggested action GOOD? [y/n] (optional): y
Short comment (why): /
✅ Eval written: live_20260210_154247_8f0414e0_eval.json

What did we prove / experience?

Generating **fast** accurate transcription of Flemish dialect is still a hit or miss.

BUT

Pipelining a not too accurate transcription into a long thinking LLM can result in an accurate transcription. (This is for long time after calls)

AI can interpret transcriptions well enough to provide a good suggestion.

There is a BIG speed vs accuracy trade-off

What is next? (RAG + learning loop)
